

cosmelan® ●...○

Treatment for Pigmentation
& Skin Rejuvenation

depigmentation treatment

Skin discolorations and hyperpigmentation are common aesthetically displeasing conditions. These imperfections have various origins including genetics, race, gender, pregnancy, oral contraceptive use and menopause. Free radical damage caused by excessive sun exposure also triggers the increase of both new skin discolorations and the darkening of existing pigmentation spots.

Before

After

how it works

cosmelan' Depigmentation Treatment blocks the body's biological process that causes skin discoloration. Active ingredients lighten existing discoloration while inhibiting discoloration in the skin's deeper layers from surfacing.

cosmelan ●...○

results

cosmelan' reduces the appearance of skin discoloration brought on by hormonal imbalance, photo damage and post-inflammatory hyperpigmentation in all skin types. Gentle, safe and highly effective results make cosmelan' the BEST solution for the overproduction of pigment in the skin.

treatment application

The aesthetic professional will cleanse the skin removing excess oil and dead surface cells.

The cosmelan' mask is then applied to the skin and will be allowed to act according to the amount of time determined by the aesthetic professional and patient's skin type.

The treatment is safe and simple!

benefits
